

Max Miller Ebay VIC Core Source Purchase Proof

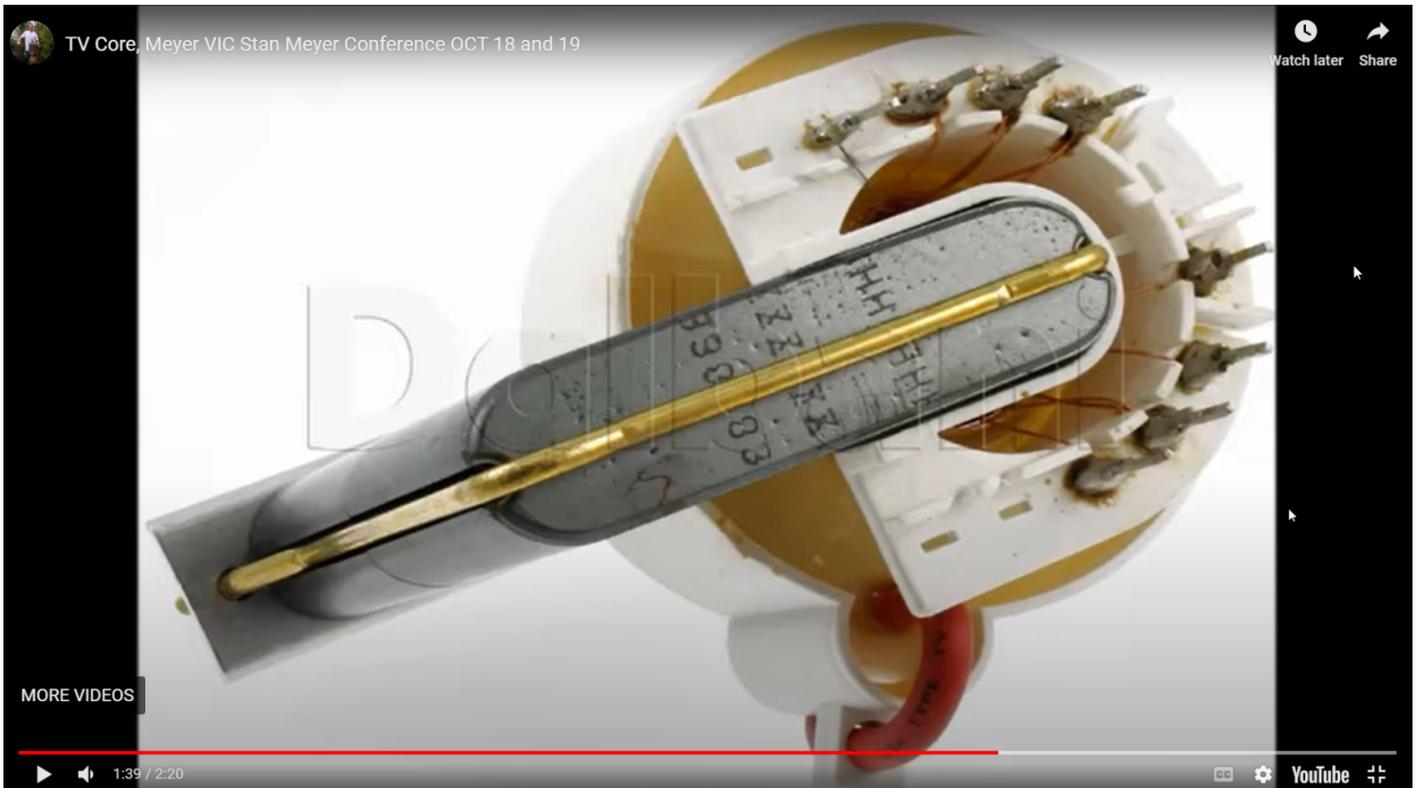

Max provided a Thingiverse upload that was utilizing a TV flyback transformer core as a potential VIC alternative. In this thingiverse, he provided a YouTube video demonstrating this VIC in operation:

[Thingiverse Youtube Video](#)

Towards the end of the video, there are two screenshots that give an Ebay source for this transformer. Please take note of the seller's location. Miami Florida. Note that this core is now \$60 upon latest checking (11-19-2022).

Below is a view of the ferrite core's markings. "88888" "XXXXX" "HHHHH".

A core from this reference was purchased. According to the seller's description, the part in photo is the actual part in their inventory.

Item Description

This listing is for one new generic F0239 Tv Flyback Transformer.

The item pictured was an actual item from our inventory.

We package the item ourselves to help protect the parts from damage during shipping.

At Dalbani we like to differentiate between new, previously installed parts (used), and parts made by 3rd party manufacturers.

- Parts labeled as "original new" are brand new and made by the original manufacturer.
- Parts labeled as "pulls" or "pulled" have been previously installed and are made by the original manufacturer. (these parts are checked for functionality before we purchase them)
- Parts labeled as "generic" are brand new and are made by third party manufacturers. (generally, the original parts offer superior quality over the generic)

If you have any further questions or need urgent assistance, you can reach us through ebay messages. Our phone lines are open from Monday thru Friday 9:00am to 6:00pm.

My box with proof it was from Dalbani in Miami Florida. The smaller white box is directly off Ebay posting.

Ferrite cores that arrived to me had same markings as shown above:

Revision #6
