

# Catalytic Block Assembly

An inverted hemispherical cavity placed on top of and in space relationship to the "**Quenching Disc**" insures total gas-combustion by recycling any "escaped" or "unused" burnable gases back into the gas-flame for **Gas-Ignition**

... preventing **Gas-Oxide** formation, as illustrated in Figure (2-8) as to Figure (2-4).

Figure (2-8)

NOTE:  
1) OXYGEN ATOM MUST UNITE WITH HYDROGEN ATOMS TO CAUSE GAS IGNITION.  
2) TUBULAR PASSAGEWAY PREVENTS MOVING GAS ATOMS FROM REGROUPING.

FIGURE 2-5: PREVENTING GAS IGNITION
