

Hydrogen Fracturing Process

... using Water as Fuel.

Over the Years man has used water in many ways to make his life on Earth more productive.

Why not, now, use water as fuel to power our cars, heat our homes, fly our planes or propel spaceships beyond our galaxy?

Biblical prophesy foretells this event.

After all, the energy contained in a gallon of water exceeds 2.5 million barrels of oil when equated in terms of atomic energy.

Water, of course, is free, abundant, and energy recyclable.

The Hydrogen Fracturing Process dissociates the water molecule by way of voltage stimulation, ionizes the combustible gases by electron ejection and, *then*, prevents the formation of the water molecule during thermal gas ignition

... releasing thermal explosive energy beyond "normal" gas burning levels under control state

... and the atomic energy process is environmentally safe.

The Hydrogen Fracturing Process is systematically activated and performed in the following way:

Hydrogen Fracturing Process Method

Using "**Voltage Potential**" to stimulate the water molecule to produce atomic energy on demand.

Operational Parameters:
