

Suspended and dissolved **water**

... thereby, extracting **contaminates** (144a xxx 144n) from **water bath** (68)

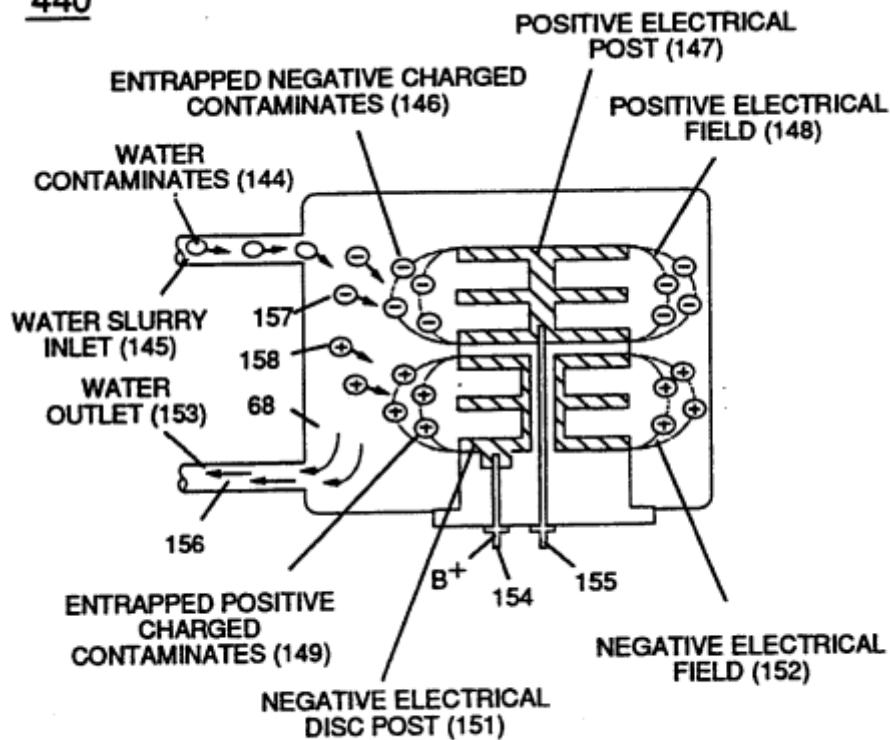

FIGURE 3-45: ELECTROSTATIC FILTER ASS'Y

... producing **purified water bath** (156) which is recycled back into **Fuel Cell** (120) of Figure (3-24) since **Resonant Action** (170) also function as and performs as a **water-pump** (Gas rising).

Exposing **water contaminants** (144a xxx 144n) to **applied voltage fields** (E1/E2) not only produces **electrical charged contaminants** (157/158); but, also, kills bacteria that might be present in **water bath** (68).

Periodically **back-flushing** (rinsing out) is all that is required to ensure and sustain **Electrostatic Filter Process** (440).
